

LASER SIZE SHELF UPGRADE

for Quantum Neo and QTM - upgrade 2022

BENEFITS

- * **No more bearings replacement**
- * **Cost-effective upgrade opportunity**
- * **Minimal disruption**
- * **Retro-fittable**

As part of Cerulean's continued improvement program, we have developed a range of upgrade options to ensure customer satisfaction and user experience remains at the heart of our solutions.

Our well-established QTM3 and Quantum Neo C shelves have utilised a Beta-Lasermike measuring device and as part of the upgrade, has been upgraded to a Micro-Epsilon laser.

Not only is this measurement shelf a direct swap but the laser is static, so it removes the need to replace the mirrors and bearings. Therefore increasing the shelf's reliability and reducing maintenance costs.
