

Preventative Maintenance

Preventative Maintenance is critical to the life and availability of your FPS equipment. Without regular maintenance, unattended, lingering problems can decrease equipment performance and lead to unnecessary downtime and unplanned service costs due to unexpected failures. Protect your investment against the unexpected with scheduled preventative maintenance that can proactively identify and resolve potential issues before they happen. The service visits will help ensure that your equipment performs consistently and reliably throughout its life cycle.

+ Reduce downtime

+ Extended Equipment Lifespan

+ Maintain and Optimize Speed

+ Increase Efficiency

Simplify your service and increase your maintenance efficiency with our service kits, designed to ensure you have all relevant parts and other materials easily available to perform your planned maintenance when it's scheduled.

*Each service kit has been tailored to accommodate the FPS-300s, FPS-1s, and FPS-1r with equal efficiency.

Tailored for our customers who prioritise long-term performance, each one of our service packages extends comprehensive maintenance support for two, four, or eight years following the installation of your FPS equipment. Each kit is designed to be an integral part of your equipment's lifecycle, ensuring that it continues to operate at its best. Cerulean's service kits reflect our commitment to delivering an unparalleled and worry-free experience.

Over time, batteries naturally degrade, leading to decreased performance and data loss if not addressed promptly. With our 4-year service, Cerulean engineers will replace your batteries to maintain optimal performance, but we will also provide you with a complimentary memory card, safeguarding them against any potential loss during battery replacements or other unforeseen circumstances. This key feature makes the kit essential as it ensures uninterrupted performance without the risk of data loss.

Trust in Cerulean's recommended service kits to safeguard the durability and performance of your equipment for the long haul.
